Cabbage user since October 2015

Cabbage, by Alann LLC
262 Winthrop Drive
Cheshire, CT 06410

CHALLENGE

With over 200 clients between two distinct client groups (commercial and residential) M Brett Painting found it impossible to *manually* keep track of projects in a timely and orderly fashion - which led to erroneous reporting.

BACKGROUND

To complete their management cycle, M Brett was required to print a variety of reports, with information that then needed to be manually added to complete the project tracking.

"We need to be able to create an accurate WIP schedule that can easily update cost projections with immediate revision results."

SOLUTION

M BRETT PAINTING WITH CABBAGE'S HELP

- Cabbage connects to the existing system **streamlining the cost** to complete projections, (real-time data manipulation inside the CIP view eliminating the lengthy process of verifying changes), and automatic WIP schedule creation.
- Using Cabbage saves M Brett Painting **valuable time** because it reduces data manipulation and eliminates redundancies of data entry. Changes are immediate and the WIP Schedule is automatically created.

M Brett does not need to print a variety of informational reports anymore, because this information is automatically updated by Cabbage. Cabbage significantly reduced the lengthy process of verifying changes, allowing accurate information to be readily available for use by management.

"The process of completing the monthly WIP Schedule, previously could take up to a week. With Cabbage this can be complete in a day or two."
